HeatTrak products are made of durable material and lie on top of existing surfaces to melt snow at a rate of two inches per hour. As with all HeatTrak heated mat products, the Heated Outdoor Walkway Mat and Heated Outdoor Safety Treads are designed to be left outside for the entire winter season.

HeatTrak products provide a safer environment around home and workplace during the winter months. Customers will appreciate the no-shovelling convenience of these heated mats and the environmentally friendly alternative to calcium chloride when melting snow and ice.

The Heated Outdoor Residential Walkway Mat: the HeatTrak HR20-60 Residential Snow & Ice Heated Walkway Mat is a 20-Inch by 5-Foot 120 Volt which offers slip protection at low cost. Both the heated outdoor residential mat and **Residential Door Mat** come with their own watertight connector cables enabling them to connect to additional mats and treads to cover larger areas. Homeowners can customize their heated mat systems based on the size of the area they want to cover. A customer can connect a maximum of five walkway mats, 12 safety treads, or a combination thereof, on a single control unit (sold separately).

The Heated Outdoor Industrial Walkway and Stair Mats: are made from Reinforced UV stabilized, natural rubber. The HeatTrak heated walkway mat is the safe, easy way to help prevent winter slips and falls at the work place - no salt, chemicals or shovelling. Have your system controlled by an automatic snow switching monitor or just turn the mat on when snow starts to fall, and watch even the heaviest snow melt - up to 2 inches an hour. When the snow is done, the mat turns off automatically/or manually. The heated walkway mat has been designed to be left in place all winter long, and will endure harsh wear and high traffic. The 6 ft. ground fault-protected power cord plugs directly into a standard 120V or 240V outlet.

No more fear of slipping, falling and injuring yourself on the sidewalk because of dangerous ice or snow accumulation. With HeatTrak walkway mat, you can leave your home or office with the peace of mind of knowing that your passage way is clear. HeatTrak walkway mat comes in both 120 and 240 volt and in many different sizes to accommodate any home or business. Just position your HeatTrak walkway mat over existing sidewalk surface, plug it in and turn it on. This durable non-slip rubber mat can be secured to the walkway and left out in the harshest of climates.

HeatTrak, manufacturer of heated outdoor safety mats for industrial and residential use, took first-place for best new product in the annual Home wares Show Awards at the National Hardware Show held in Las Vegas.

The company's Heated Outdoor Safety Treads won the Gold Award, the top honour in the Home wares category.

Industrial Product Information

Surface

Thickness	1/4"
Chevron Height	1/8"
Grommet Size	3/8"
Material	Reinforced UV stabilized, natural rubber

Heating Element

Voltage	120Vac or 240Vac
Power Density	38 - 40 Watts/SF *

In-line Safety Device / Power Cord

Service voltage	120Vac or 240Vac
Circuit breaker rating	15A
GFCI trip level	6mA
Cold lead length	6 ft
Cord gauge	14/3 SJTW

** SF area of the heating elements. There are no heating elements within the 2" perimeter of the mats.*
